Compact alarm control unit for vehicles with original door locking remote controls

*D*evice to use in vehicles equipped with an original central door locking remote control. Direct interfacing with the original signals of the vehicle protects the control unit against all attempts at tampering. The control unit is of the compact type and designed for installation in the engine housing. It is fully protected against adverse weather conditions thanks to its retention seals and a special waterproof "automotive" connector.

The full series of alarm protections and facilities make it the ideal addition to the original remote control. The alarm control unit can be disarmed with the emergency electronic key if the key head is faulty.

ALARM CONTROL UNIT M750	
	Arming/disarming with the original signal
	Engine immobiliser (relay 10A)
	Self-powering with internal battery low status indication
	Door / bonnet / boot protection
	Volumetric protection of the passenger compartment which can be cut-out by means of the remote control <i>(with ultrasounds - M15 mykro, or super-high frequency - M23)</i>
	Voltage drop sensor (can be cut out)
	Key-positive sensor
	Turning indicators - blinker
	High power siren
	Alternate horn control output
	Emergency electronic key <i>(variable code - random rolling code)</i>
	Auxiliary module command
	Open door signal
	Alarm input test
	LED indicator with alarm memories

M23 SUPER-HIGH FREQUENCY VOLUMETRIC PROTECTION MODULE

To protect the passenger compartments of convertible and very spacious cars (station wagons, vans, all-terrain vehicles, ...).

M16mykro FLUIDIC MOVEMENT SENSOR

Memorizes the position of the vehicle when the alarm is armed and signals any movements.

M15mykro VOLUMETRIC ULTRASOUND PROTECTION MODULE

Sophisticated technology achieves optimum protection for the passenger compartment of the vehicle, even when the windows or roof are half-open.

M8 WINDOW WINDING MODULE

The electric windows automatically raise when the alarm is armed.

M143 + M6 ANTI CAR-JACKING KIT

This device controls the central locks when the vehicle is moving, protecting against theft attempts when the vehicle is at a standstill at traffic lights or in similar situations.

EXPERIENCE

Over 25 years of activity in the professional electronics field with particular reference to radio-frequency systems and monitoring electronics based on microprocessors.

PLANNING

Wide use of techniques for the preventive analysis of causes and effects (FMEA) as required by AUTOMOTIVE technical specifications (car makers).

PRODUCT

Compliance with the strictest standards imposed by European Directives, Insurance Companies and Car Makers

QUALITY

Company Quality System (planning-production-distribution) certified according to restrictive standards ISO 9001 and AVSQ 94.

WARRANTY/SERVICE

A 3-year warranty and regular technical refresher courses for our authorized installers.

Service operative Mondays to Fridays from 9 a.m. to 12.30 p.m. and from 2 p.m. to 6.30 p.m..

The best technology for your security
